

AI for Office Automation

DAY 2 — TASKS WORKBOOK

Session Duration: 4 Hours | 12 Tasks | Individual & Pair Exercises

Participant Information

Name:	Maiyada Albarwani	Date:	10.09.2026
Job Title:		Department:	

Session Schedule

Time	Section	Tasks	Focus
0:00 – 0:50	A — Workflow Design	Tasks 1–2	AI workflow thinking + IPO design
0:50 – 1:40	B — Prompt Engineering	Tasks 3–5	Role-based prompts + structured outputs + constraints
1:40 – 2:40	C — Communication	Tasks 6–8	Email chains, executive memos, meeting minutes, tone
2:40 – 3:40	D — Reports & Documentation	Tasks 9–11	Multi-doc analysis, executive summaries, SOPs, slides
3:40 – 4:00	E — Workflow Planning	Task 12	Personal AI workflow plan for Day 2 topics

■ Blue tasks = General business

■ ■ ■ Purple tasks =
Developer-specific

■ Teal tasks = Mixed / choose your path

SECTION A AI Workflow Design — Input → Process → Output

TASK 1 Design an AI Workflow from Scratch

■ 25 min
● Beginner

■ Instructions

1. Choose ONE recurring task from your daily work (or use the example below).
2. Fill in the IPO Workflow Design table below.
3. Write a CRTFC prompt for the AI Process step.
4. Test the prompt and evaluate the output.
5. Identify what you would add to improve the workflow.

Example Task (or choose your own):

You receive raw bullet-point notes after every client call. Currently you spend 20–30 minutes writing these up into a structured call summary for your CRM and manager. Design an AI workflow to automate this.

Step 1 — IPO Workflow Design Table

Step	Your Workflow Design	Questions to Answer
INPUT		What raw material do you start with? What format is it in?
PROCESS		What AI tool? What prompt strategy? Single or multiple prompts?
OUTPUT		What exact format? Who receives it? What decision points?
REVIEW		Who reviews? What do they check? How long should it take?

Step 2 — Write Your CRTFC Prompt for the Process Step

Element	Question	Your Answer
Context	What is the situation? Who are you?	I am a software developer working on a school application project for a client conducting a meeting withh client trough the phone
Role	Who should AI act as?	Act as a professional developer
Task	What exactly do you want?	Take the bullet points from the meeting with the client and make it into a proper meeting minutes
Format	How should the output look?	Make it one page long, format it in a clear way for anyone to read. With a professional tone
Constraints	Any limits, tone, exclusions?	Do not add any information that is not given, do not include bullet points.

Step 3 — Paste Your Combined Prompt Here (write it out in full):

I am a software developer working on a school application project for a client conducting a meeting withh client trough the phone. Act as a professional developer. Take the bullet points from the meeting with the client and make it into a proper meeting minutes. Make it one page long, format it in a clear way for anyone to read. With a professional tone. Do not add any information that is not given, do not include bullet points.

Step 4 — Test it and rate the output:

■ 1 — Poor ■ 2 — Fair ■ 3 — Good ■ 4 — Very Good ■ 5 — Excellent

Step 5 — What would you add or change to improve this workflow?

Specify more about the constraints.

TASK 2 Identify Your Top 5 Automation Opportunities

■ 25 min

● Beginner

■ Instructions

1. List your 5 most repetitive or time-consuming writing/communication tasks.
2. For each task, estimate the time it currently takes and the time AI could save.
3. Score each task on automability (1=hard to automate, 5=easy to automate).
4. Circle your top 3 tasks — these become your personal workflow priorities.
5. Share your top choice with the group and explain why.

My Top 5 Repetitive Tasks — Automation Opportunity Audit

Task Description	Current Time	AI Time Saved	Automability (1–5)	Priority?
Writing weekly status updates to my team	30–40 min	20–25 min	■ ■ ■ ■ ■	■ Yes ■ No
Writing PR descriptions after finishing a fix	15–20 min	10 min	■ ■ ■ ■ ■	■ Yes ■ No
Turning messy meeting notes into clean summary	25–30 min	15–20 min	■ ■ ■ ■ ■	■ Yes ■ No
Writing simple unit tests for small functions	40–50 min	25–30 min	■ ■ ■ ■ ■	■ Yes ■ No
Explaining technical things to non-technical teammates	20 min	10 min	■ ■ ■ ■ ■	■ Yes ■ No

My top automation opportunity (explain why it was chosen and what the ideal output looks like):

Writing weekly status updates.

It is something I do every week and it always takes longer than it should. The ideal output is a short, clear email or message with 3 sections: What I finished, What is blocked, and What I plan for next week.

What context would AI need that it doesn't currently have?

It needs to know my current tasks, any blockers I'm facing, and the names of the people on my team. I would have to give it a short list of what I actually did that week every time.

SECTION B

Advanced Prompt Engineering — Roles, Outputs & Constraints

TASK 3 Role Upgrade — Rewrite 4 Weak Roles

■ 20 min

● Beginner

■ Instructions

1. Each row below has a weak role assignment.
2. Rewrite each as a strong role (include seniority, domain, and audience).
3. Test one strong role and compare its output quality against the weak version.
4. Note: which dimension (seniority / domain / audience) made the biggest difference?

#	Weak Role (Do Not Use)	Your Strong Role Rewrite	What You Added
1	You are a writer.	You are a senior technical writer with 8 years experience writing clear documentation for non-technical managers and clients.	Seniority + domain (technical writing) + audience (managers & clients)
2	You are a developer.	You are a mid-level backend developer who specializes in Python and explains code in simple language for junior teammates.	Domain (Python backend) + audience (junior teammates)
3	You are an expert.	You are a senior software engineer with 10+ years experience in web development who reviews code carefully and gives practical advice.	Seniority + domain (web development)
4	You are helpful.	You are a patient senior developer who mentors junior developers and explains technical topics in everyday language.	Seniority + audience (junior developers) + style (patient + simple language)

Which dimension (seniority / domain / audience) had the biggest impact on output quality? Why?

Audience made the biggest difference for me. When I told the AI who the answer is for (junior teammates or managers), the language became much clearer and more useful.

Rate the difference between weak and strong role output: 4

■ 1 — Poor ■ 2 — Fair ■ 3 — Good ■ 4 — Very Good ■ 5 — Excellent

TASK 4 Build a Structured Output Prompt

■ 20 min

● Intermediate

■ Instructions

1. Choose one of the three scenario options below.
2. Complete the full CRTFC table for your chosen scenario.
3. Write the combined prompt with a structured output specification.
4. Test the prompt. Evaluate whether the output exactly matches your specification.
5. Write one follow-up turn to refine the output.

Choose Your Scenario:**■ Scenario A**

Write a weekly team status report as a structured Markdown table with sections: Completed / In Progress / Blockers / Next Week.

■ ■ ■ Scenario B

Generate a code review report for a Python function, formatted as numbered issues each with Severity (H/M/L), Description, and Suggested Fix.

■ Scenario C

Create a multi-document comparison table analyzing two different approaches to a problem of your choice (one row per criterion).

I chose Scenario: A

Element	Question	Your Answer
Context	What is the situation? Who are you?	I am a junior developer. Every Friday I need to send a short status update to my team lead.
Role	Who should AI act as?	Act as a clear and organized team member who writes simple status reports.
Task	What exactly do you want?	Create a weekly status report with these sections: Completed, In Progress, Blockers, Next Week.
Format	How should the output look?	Markdown table with 4 columns: Section Details Owner Status
Constraints	Any limits, tone, exclusions?	Keep it short (under 150 words). Use simple language. No technical jargon.

My Structured Output Specification (describe exactly what format you want):

Format Type	■ Table ■ Numbered List ■ JSON ■ Paragraphs ■ Slide Outline ■ YAML ■ Other: Table
Exact Columns / Keys / Sections	Section Details Owner Status
Length / Quantity Constraint	Maximum 8–10 rows total

My Combined Prompt (CRTFC + Output Specification):

You are a clear and organized junior developer. Create a short weekly status report for my team lead. Use a Markdown table with these columns: Section | Details | Owner | Status. Sections must be: Completed, In Progress, Blockers, Next Week. Keep the whole report under 150 words and use simple language.

My Follow-Up Turn (to refine the output):

Please make the “Blockers” section more specific and add one clear next action for each blocker.

Rate how closely the output matched your specification: 4

■ 1 — Poor ■ 2 — Fair ■ 3 — Good ■ 4 — Very Good ■ 5 — Excellent

TASK 5 Constraint Engineering Practice

■ 20 min

● Advanced

■ Instructions

1. Read each weak prompt below — identify which constraints are missing.
2. Rewrite with at least 3 explicit constraints added.
3. Test the rewritten version and evaluate the improvement.
4. BONUS: add a constraint that forces the AI to flag uncertainty.

Prompt 1 — Weak (Do Not Use As-Is)

`Summarize this meeting.`

Missing constraints: No format, no length, no sections, no audience.

Rewritten prompt: Summarize this meeting in 4 short sections: Attendees, Key Decisions, Action Items (with owner and deadline), and Blockers. Keep it under 120 words and use simple bullet points.

Prompt 2 — Weak (Do Not Use As-Is)

`Write a report about our Q3 performance.`

Missing constraints: No structure, no audience, no length, no focus.

Rewritten prompt: Write a short Q3 performance report for my manager. Use 3 sections: What went well, What needs improvement, and Recommendations. Maximum 200 words. Use clear and professional language.

Prompt 3 ■■■ — Weak (Do Not Use As-Is)

`Review this code and fix any issues.`

Missing constraints: No severity levels, no explanation style, no language limit.

Rewritten prompt: Review this Python function. List every issue with Severity (High / Medium / Low), a short description, and a suggested fix. Explain each issue in simple language that a junior developer can understand. Do not change the function name.

Which constraint type had the biggest impact on output quality?

■ 1 — Poor ■ 2 — Fair ■ 3 — Good ■ 4 — Very Good ■ 5 — Excellent

Format + Length constraints. When I told the AI exactly how to structure the answer and how long it should be, the output became much more useful and ready to use.

SECTION C

AI for Professional Communication

TASK 6 Email Chain — Draft a Professional Reply

■ 25 min

● Intermediate

■ Instructions

1. Read the email thread scenario below.
2. Complete the CRTFC table for your reply strategy.
3. Write and test your prompt. Evaluate the result.
4. Ask AI to produce two alternative tone versions (formal and direct).
5. BONUS: paste a real email thread from your own work (anonymize first).

Email Thread Scenario:

THREAD: Project Timeline Delay

From: Sarah (Client) — "We were expecting the first deliverable by end of this week. Our team has scheduled a board presentation based on this. Can you confirm it is still on track?"

From: Ahmed (Your Manager, internal) — "There is a 5-day delay due to a dependency on the data team. We haven't told the client yet. You need to communicate this professionally."

Your task: Draft a professional reply to Sarah acknowledging the delay, providing a revised date, and offering to reschedule her board presentation if needed.

Element	Question	Your Answer
Context	What is the situation? Who are you?	I am a junior developer. The client is asking why the feature is delayed.
Role	Who should AI act as?	Act as a polite and professional developer.
Task	What exactly do you want?	Write a short reply email explaining the delay and giving a new realistic date.
Format	How should the output look?	Professional email, 3 short paragraphs.
Constraints	Any limits, tone, exclusions?	Be honest but positive. Do not blame anyone. Keep it under 100 words.

My Full Email Prompt:

AI Generated Email (paste result or take notes):

Subject: Update on the login feature timeline

Hi [Client Name],

Thank you for your message. We found a few important issues during testing that need to be fixed before we can release the feature safely.

We are working on them now and expect to complete everything by next Wednesday. I will send you another update as soon as it is ready for review.

Please let me know if you have any questions.

Best regards,

Rate the email quality:

■ 1 — Poor ■ 2 — Fair ■ 3 — Good ■ 4 — Very Good ■ 5 —
Excellent

What changes did you make before you would send this email?

TASK 7 Write an Executive Memo Using AI

■ 25 min

● Intermediate

■ Instructions

1. Choose one of the two memo scenarios below.
2. Use the Executive Memo Template structure from the Explanation Guide.
3. Write your CRTFC prompt and test it.
4. Verify: does the AI lead with recommendation or build up to it?
5. If it builds up to it, add a constraint and re-test.

■ Memo Scenario A

Your IT department wants to migrate from on-premise servers to cloud. Write an executive memo to the CEO recommending approval. Budget impact: 15% cost reduction. Timeline: 6 months. Risk: 2-week migration window.

■ ■ ■ Memo Scenario B

Your engineering team wants to adopt TypeScript for all new services (currently JavaScript). Write an executive memo to the CTO recommending approval. Benefits: type safety, fewer runtime errors. Timeline: 3-month migration. Risk: team upskilling.

I chose Scenario: _____

Element	Question	Your Answer
Context	What is the situation? Who are you?	
Role	Who should AI act as?	
Task	What exactly do you want?	
Format	How should the output look?	
Constraints	Any limits, tone, exclusions?	

Quality Checklist — Verify Your Executive Memo

- Leads with RECOMMENDATION (not situation)
- TO / FROM / DATE / SUBJECT header present
- RATIONALE has 3–4 bullet points
- NEXT STEPS table has Action / Owner / Deadline
- Under 300 words
- No jargon (or appropriate for audience)

Rate the executive memo quality:

■ 1 — Poor ■ 2 — Fair ■ 3 — Good ■ 4 — Very Good ■ 5 — Excellent

TASK 8 Meeting Minutes + Tone Adaptation

■ 20 min

● Intermediate

■ Instructions

1. Use the raw meeting notes below to generate structured meeting minutes.
2. Use the Meeting Minutes Template from the Explanation Guide.
3. Then take your minutes output and adapt it for TWO different audiences.
4. Compare how differently the same information reads in each version.

Raw Meeting Notes — Sprint Planning Session:

Date: Monday. Attendees: Ali (PM), Reem (Dev Lead), Omar (Backend), Fatima (QA), Nour (Design).

Discussed Q4 sprint goals. Ali says we need to ship the payment module by end of month — hard deadline from client.

Omar said backend API is 70% done but auth integration has a blocker — waiting for the security team to sign off on OAuth config. Estimated 3 days delay if not resolved by Wednesday.

Fatima raised concern: QA hasn't been involved early enough. Bugs found late. Suggested QA joins sprint planning from now on. Everyone agreed.

Nour showed updated UI mockups. Approved. Minor change requested to the checkout flow — needs one more revision.

Decisions: Ship payment module Nov 30. QA joins sprint planning. Omar to escalate OAuth issue to security team today.

Next meeting: Wednesday standup to check on OAuth blocker.

My Meeting Minutes Prompt:**Minutes Result (key sections — Actions & Decisions):****Tone Adaptation — Rewrite for Two Audiences:**

SECTION D

AI for Reports & Documentation

TASK 9 Multi-Document Analysis

■ 25 min

● Intermediate

■ Instructions

1. Read the two mini-documents provided below.
2. Write a prompt to synthesize both into a consolidated analysis.
3. Request: Executive Summary + Key Themes Table + Top 3 Insights with citations.
4. Evaluate: did AI correctly cite which document each insight came from?
5. BONUS: add a third document from your own work.

Document 1 — Q3 Customer Feedback Survey Summary:

Total responses: 87. Overall satisfaction: 3.6/5.

Top positive themes: fast onboarding (mentioned 34 times), responsive support team (28 times), clean interface (22 times).

Top negative themes: slow report generation (41 times), missing bulk export feature (38 times), mobile app crashes (27 times).

NPS score: +12. Most common suggestion: 'Make the dashboard load faster — it takes 8-10 seconds on average.'

Document 2 — Q3 Engineering Performance Report:

Sprint velocity: average 42 story points (target was 50). 3 out of 4 sprints delivered on time.

Key achievements: launched payment integration (2 weeks early), completed security audit with 0 critical findings.

Ongoing issues: report generation module is under-resourced — 1 engineer, 3 open bugs, last updated 4 months ago.

Tech debt: mobile codebase flagged as 'high risk' — last major refactor was 18 months ago.

Team highlight: QA integration into sprint planning (new process) — reduced late-stage bug discovery by 30%.

My Multi-Document Analysis Prompt:

Results Evaluation:

Check	Did AI do this?	Notes
Produced an Executive Summary	☐ Yes ☐ No ☐ Partially	
Created a Key Themes table	☐ Yes ☐ No ☐ Partially	
Cited sources for each insight	☐ Yes ☐ No ☐ Partially	
Flagged any conflicts between docs	☐ Yes ☐ No ☐ N/A	
Stayed within requested format	☐ Yes ☐ No ☐ Partially	

What prompt change would improve the citation or theme detection?

**TASK
10****Write an Executive Summary**

■ 25 min

● Intermediate

■ Instructions

1. Use the combined content from Task 9 (both documents) as your source.
2. Write a prompt for an executive summary using the strict structure from the Explanation Guide.
3. Test with a 200-word limit, then a 100-word limit — compare the two results.
4. Verify: does the recommendation appear first?
5. Check: did AI add any information NOT in the source documents?

Element	Question	Your Answer
Context	What is the situation? Who are you?	
Role	Who should AI act as?	
Task	What exactly do you want?	Write an executive summary of the Q3 customer + engineering documents
Format	How should the output look?	
Constraints	Any limits, tone, exclusions?	Max [200 / 100] words. No new information. Recommendation first.

My Executive Summary Prompt (200-word version):**Side-by-Side Comparison:**

200-Word Version — Key Differences	100-Word Version — Key Differences
Recommendation appeared: ■ First ■ Last Extra info added: ■ Yes ■ No Most useful section:	Recommendation appeared: ■ First ■ Last Extra info added: ■ Yes ■ No Most useful section:

Which word limit produced the more useful executive summary? Why?

**TASK
11****Convert a Report into a Presentation Outline**

■ 25 min

● Advanced

■ Instructions

1. Use the combined Q3 findings (Tasks 9–10) as your source report.
2. Write a prompt to convert it into an 8-slide presentation outline.
3. Specify: audience, goal, flow, and max 30 words per slide.
4. Evaluate: does the flow follow Hook → Context → Problem → Solution → CTA?
5. BONUS: ask AI to write speaker notes for slides 3 and 5.

Element	Question	Your Answer
Context	What is the situation? Who are you?	
Role	Who should AI act as?	Presentation strategist and executive communications expert
Task	What exactly do you want?	Convert Q3 report into 8-slide presentation outline
Format	How should the output look?	
Constraints	Any limits, tone, exclusions?	Max 30 words per slide. Flow: Hook → Context → Problem → Solution → CTA

My Report-to-Presentation Prompt:**Slide Outline Evaluation:**

Slide	AI-Generated Title	Under 30 words?	Flow Stage	Speaker Note?
1		■ Yes ■ No	Hook	■ Yes ■ No
2		■ Yes ■ No	Context	■ Yes ■ No
3		■ Yes ■ No	Problem	■ Yes ■ No
4		■ Yes ■ No	Problem	■ Yes ■ No
5		■ Yes ■ No	Solution	■ Yes ■ No
6		■ Yes ■ No	Solution	■ Yes ■ No
7		■ Yes ■ No	Evidence	■ Yes ■ No
8		■ Yes ■ No	CTA	■ Yes ■ No

Rate the presentation outline quality:

■ 1 — Poor ■ 2 — Fair ■ 3 — Good ■ 4 — Very Good ■ 5 —
Excellent

Which slide needed the most editing? What was missing?

SECTION E

Personal AI Workflow Plan — Day 2 Topics

TASK
12

Build Your Day 2 Personal AI Workflow Plan

■ 20 min

● Advanced

■ Instructions

1. Review the automation opportunities you identified in Task 2.
2. Map your top 5 tasks to Day 2 AI skills (workflow, communication, documentation).
3. For each task, identify the template you will use and estimate the time savings.
4. Choose your top 3 — these are your implementation priorities.
5. Prepare a 60-second pitch: 'I will use AI to automate [task] using [method], saving [time].'

My Day 2 AI Workflow Plan

Task / Deliverable	AI Skill (from Day 2)	Template to Use	Time Saved	Top 3?
				■
				■
				■
				■
				■
				■

My 60-Second Pitch (write it out — you will present this to the group):

Day 2 Final Reflection

Q1: Which communication or documentation task will save me the most time with AI?

Q2: What was the most surprising result from testing prompts today?

Q3: Which prompt technique (role, structured output, constraint, multi-turn) was hardest to master?

Q4: What is the first AI workflow I will implement in my real work this week?

Q5: What question do I still have about AI for professional communication or documentation?

■ Day 3 Preview — What to Expect

Day 3 covers the second half of AI for Office Automation: AI + Data Analysis (uploading CSV/Excel, cleaning, insights), Building Mini-Automations (reusable templates, sales summaries, feedback categorization), Introduction to No-Code Tools (Make, Zapier, n8n), and the Capstone Workflow Lab where you will build and present a full automation scenario. Bring a real dataset or process from your work to use in the Capstone Lab.
